SYSTEM AND METHOD FOR MEASURING WEB PAGE

ADVERTISEMENT IMPRESSIONS

CLEAN CLAIMS

A system for measuring user interaction with a defined space on a network

of a network, the system comprising

at least one server in communication with the network, the server hosting one or more network sites where each net√ork site includes a display area having one or more defined spaces, each defined space having a predetermined area on the display area of the network site; and

at least one user computer in communication with the network, the user computer including a browser that/selectively interacts with network sites, the user computer further having a cursor manipulated by the user about the display area of an interacted network site, and the user computer selectively recording interaction data relative to cursor placement and time relative to movement on a specific defined space on the display area of the interacted network site and transmitting the interaction data to the server hosting the

13 defined space.

7. A method for measuring user interaction with a defined space on a network site hosted by a server on a network, each network site including a display area that has one or more defined spaces where each defined space has a predetermined area on the display area, the network further having at least one user computer in communication therewith including a browser that selectively interacts with network sites, the user computer further having a cursor manipulated by the user about the display area of an interacted network site, the method comprising the steps of: interacting with a network site through the browser on the user computer;

selectively recording interaction data on the user computer relative to cursor placement and time relative to movement on a specific defined space on the display area of the interacted network site; and

transmitting the interaction data to the server hosting the defined space.

at least one user computer in communication with the network, the user computer including a browser that selectively interacts with network sites, the user computer further having a cursor manipulated by the user about the display area of an interacted network site, and the user computer selectively recording interaction data relative to a location of a cursor on a display area and the duration upon with the cursor is left at the specific location on the display area of the interacted network site and transmitting the interaction data to the server hosting the defined space.

16. The system of claim 15, wherein the network is the Internet; and the network site is a website.

1

- 17. The system of claim 15, wherein the user computer records the interaction data by execution of a program in Javascript.
- 18. The system of claim 16, wherein the user computer transmits the interaction data to the server hosting the defined space at the conclusion of the interaction between the browser of the user computer and a website.
